ASAM and OpenEvidence Partner to Expand Access to Evidence-Based Addiction Medicine Guidance

Collaboration brings ASAM's clinical guidelines and implementation resources to the point of care for the millions of clinicians who use OpenEvidence.

MIAMI and ROCKVILLE, Md. (Oct. 28, 2026) — The American Society of Addiction Medicine (ASAM) and OpenEvidence, the most popular AI for doctors in the United States, today announced a collaboration to make ASAM's clinical guidelines, guidance, and implementation resources accessible through OpenEvidence. This integration enables OpenEvidence's clinician users to readily access ASAM's evidence-based guidance for the care of patients with substance use disorders (SUD) and addiction. ASAM's guidance will surface automatically when clinically relevant, alongside peer-reviewed literature, with citations and a direct link back to the source.

Through this collaboration, clinicians can rapidly surface and review addiction medicine clinical guidelines and guidance from ASAM. In 2025, 44.6 million Americans had a substance use disorder in the past year, demonstrating an urgent need to continue expanding access to clinical resources that support evidence-based practices for the treatment and prevention of SUD as well as behavioral addictions.

"ASAM's clinical practice guidelines aim to equip clinicians with high-quality, science-based guidance to support the care of patients with addiction and facilitate a path to long-term health and recovery," said **Stephen M. Taylor, MD, MPH, president of the American Society of Addiction Medicine.** "Through this collaboration, we hope to make ASAM's evidence-based treatment guidance more accessible to all healthcare professionals who may provide care for patients with addiction."

"Addiction is one of the most common conditions clinicians encounter, and too often, evidence-based guidance isn't at hand when a treatment decision is being made," said **Isabel Ostrer, Director of Primary Care Initiatives at OpenEvidence**. "ASAM sets the standard of care in addiction medicine. Bringing its guidelines directly to the point of care means every clinician, wherever they practice, can offer patients with substance use disorders care grounded in the best available evidence."

About the American Society of Addiction Medicine
The American Society of Addiction Medicine (ASAM), founded in 1954, is a professional medical society representing over 8,000 physicians, clinicians, and associated professionals in the field of addiction medicine. ASAM is dedicated to increasing access and improving the quality of addiction treatment, educating physicians and the public, supporting research and prevention, and promoting the appropriate role of physicians in the care of patients with addiction. For more information, visit www.ASAM.org.

About OpenEvidence
OpenEvidence is the most popular AI for doctors in the United States. According to independent studies, more American physicians use OpenEvidence than all other AI platforms combined. OpenEvidence is trusted by millions of verified U.S. healthcare professionals making high-stakes clinical decisions at the point of care, with evidence that is sourced, cited, and grounded in peer-reviewed medical literature. Founded with the mission to organize and expand the world's collective medical knowledge, OpenEvidence is now used daily, on average, by the majority of physicians in the United States. OpenEvidence is free for all verified U.S. clinicians. Learn more at openevidence.com.
